

Masters in **engineering**

Masters in Engineering

A large problem-solving capacity. An ongoing focus on innovation. Flexibility. Proactive thinking together with the client. Involvement. Those are the main Delmeco Projecten qualities. We are a technical service provider with ambition. Situated in the city of Goes. Our company is active as well in the Netherlands as in the rest of the world. We never lose sight of our clients' interests.

We call ourselves Masters in Engineering. We are an independent operating company of Delmeco Group B.V. and we excel in machine and installation assembly in every field imaginable. But we do more, much more. Delmeco Projecten has an extensive specialist knowledge in the fields of electrical engineering, mechanical engineering and industrial automation. The high level of education of our employees guarantees that you get the best solutions. Our service does not stop at building, installing and implementing machinery or installations. We are also a reliable maintenance and service partner with a 24/7 fault-clearing service which is always available.

Delmeco Projecten works closely together with Delmeco Raadgevend Ingenieursbureau. We like to execute the client-oriented machine construction. The big advantage to our clients: one contact and a decisive approach of each problem which results in optimum solutions. Furthermore, we build panels for both switch boards and power distribution boards. In this field we are Masters in Engineering as well.

Skilled Project Managers and Advisors

During the building or renovation of a factory, or during a maintenance stop, Delmeco Projecten solely works with experienced project leaders. Multidisciplinary schooled. With strong communication skills. Specialists with the capacity to guide and guard the planning, finances and quality of each project. Advisors who contribute to profitable solutions. Professionals who know that cooperation always leads to better results. Skilled managers who connect and motivate people, who create support for solutions that have been chosen and who are of added value. Professionals who have a will of their own (in a good way).

Masters in engineering

And all that without losing sight of what the client desires. Specialists who go the extra mile to realise the goals agreed upon, by staying focussed on the set course. And who in the meantime bring out the best in people by cooperating in the broadest sense of the word. With the client, within construction teams and with the people that have to support a project. Professionals who know that cooperation is the key to success. Delmeco Projecten is proud of its VCA** certification. Each client can rely on us to follow all safety, health and environment regulations. This certification also enables us to act as main contractor in each project.

Finding Solutions that Amaze You

Optimising company processes. Improving organisations. Getting a better return on investments. That is what occupies us at Delmeco Projecten each day. We are Masters in Engineering. By assembling and mounting machines and installations for our clients. By finding answers to strategic questions. By thinking of solutions that help our clients move forward. We do so by listening closely to what our clients want. And by asking what goals they have set for their business. Revealing hidden

questions and turning them into effective solutions. Our cooperation with Delmeco Raadgevend Ingenieursbureau is an added value in this. With a similar dedication we adjust machines and installations developed by others. Our challenge is to offer engineering solutions that are sustainable, safe and efficient. Integrated solutions resulting from a multidisciplinary approach. And of course we always offer custom-made work for each field and each market. And always with our clients' success as our goal.

Reliable Partners, Guarantee of System Reliability

We are also Masters in Engineering with our client-oriented machine construction. Delmeco Raadgevend Ingenieursbureau takes care of the engineering in this aspect, our mechanics do the rest. Parts are solely bought from reliable partners, most of whom we have worked with for years. The result: a machine that performs optimally. Our extensive tests guarantee system reliability. As a client-oriented and transparent organisation we always do this in the presence of the client. The entire construction process, including instalment, fine tuning and alignment is taken care

PANEL CONSTRUCTION ► PROJECT MANAGEMENT*

of by Delmeco Projecten. After delivery, we can also take care of maintenance, if desired. Periodically, with clear and unmistakable agreements as a basis. On call, if necessary. That is the only way to develop lasting relationships.

Skills and Fast Turnaround

Delmeco Projecten has made quite a name for itself in the construction of control panels. In our workplace we construct switch boards and power distribution boards according to client-specific demands. Meticulous work in which care and dedication play an important role. Our people have all qualifications, precision and discipline required to construct panels. We do so for machines and installations that we constructed ourselves, but also for those constructed by third parties. Another advantage: we combine our skills with a quick delivery. Yet another unique quality of Delmeco Projecten, Masters in Engineering.

Fault-Clearing Service of our own, available and able to help at any time

Delmeco Projecten does not go for short-term success. We place high value in

cooperation at this very moment as well as at a later stage. This means that we take responsibility when it comes to service and maintenance.

Our teams have all required qualifications to make a success of each assignment. Many of our people are highly educated and have every right to call themselves Masters in Engineering. Additionally, we are continuously on the lookout for young engineering talent. All our employees have shown ample proof of having all the knowledge and motivation required. Delmeco Projecten can therefore execute all machine and installation maintenance, even for products produced by others.

Our own maintenance and fault-clearing service is always available and able to help at any time. Seven days a week, 24 hours a day.

Accumulated Knowledge, Involvement, No-Nonsense

Delmeco Projecten is proud of its long-lasting relations. For many businesses, organisations and the (semi) public sector we have become an irreplaceable partner. We operate in, amongst others, the nuclear industry, food industry, recycling/waste industry, process industry, fishing, packing industry and recreation sector. We have gained this unique market position thanks to our accumulated knowledge, our involvement and our working methods, which are best described as no-nonsense.

Delmeco Projecten is a subsidiary of mother company Delmeco Group. In a relatively short time it has become a renowned technical service supplier in the whole of the Netherlands and far beyond. In 2008, we moved into a new building on industrial estate de Poel II in the city of Goes. Delmeco Group is active in advice, project management, engineering, execution, technical installations, air treatment, machine building and industrial projects in the fields of electrical engineering and mechanical engineering. Additionally, Delmeco can rely on a broad body of knowledge from other fields of expertise. Engineering, (industrial) automation and software engineering are our specialties too.
